## Greenhood Vol. 58 No. 10 October 2017 Diary Dates

**Oct. 16<sup>th</sup>.** Regular monthly meeting at Legacy Hall Macquarie St

Feature :- Guest Speaker Ray Clements

Floral Art :- Use Cyms in this one

**Nov. 6<sup>th</sup>.** **Committee Meeting** 7.30pm. Village Centre Piper's Rd. Geilston Bay.

**Nov. 20<sup>th</sup>.** Regular monthly meeting at Legacy Hall Macquarie St

Feature :-

Floral Art :- Free Choice. Show us what you can do.

**Dec. 11<sup>th</sup>.** Regular monthly meeting at Legacy Hall Macquarie St

Feature :- Xmas. Let's Party

Floral Art :- Make a Gift for Santa

### Disclaimer

The Tasmanian Orchid Society Inc. disclaims all liability against any loss or damage, which may be attributed to the use of any article or material mentioned in Greenhood. Contributions express the views and opinions of the contributor and are not necessarily those of the Tasmanian Orchid Society.

Permission is given to reprint articles from this newsletter subject to their source being acknowledged. Contributions to this newsletter are welcome.

**The deadline for all articles** is the Friday, ten days prior to the monthly meeting. **No Exceptions.**

### **President's October Report.**

A big thank you to all those who contributed to make this Show a better success than what I thought was going to be achieved. The displays were quite magnificent, ranging from the newcomers Vicki and David Cleaver through to the age of experience. Those who contributed to the community stands also deserve appreciation. Congratulations to prize winners and all participants. You deserve to be proud of what you have achieved. Award winners will be recognised at our general meeting on Monday night. A big thankyou to all our voluntary workers. Remember

Ray Clements is our key Presenter at our meeting on Monday night and he will be bringing plants for sale.

### **Devonport Conference**

Our Society hired a van and Jim Smith transported our members winning plants for competition judging in their show. Our success was one 1st Prize and four 2nd prizes. Congratulations to those achievers. Their conference had a total attendance of about 40 so our contingent of 13 members, represented the south very well. It makes one ask what do members want when their conference had four key note presenters. Remember our Ross Orchid Day in May with Clive Hall doing 2 presentations drew an attendance of over 80.

**Peter Willson**

### **Congratulations**

Barry Davidson on taking out both Grand Champion and Reserve Champion at the Spring Show. Is this a new record for the society.

### **Wanted: Newspaper Editor.**

We have been fortunate to have Mike White as our Newspaper Editor but now Mike has decided to retire for a very well earned rest. Mike has produced one of Australia's best Orchid Society newsletters for us and we will all miss his work.

The new editor will be given scope to change the format to suit their style. The society will also look towards offering members the choice of receiving their newsletter on line.

If you have skills in this area which you can offer please consider doing so. You will receive back up support by the secretary and any other members who can be of assistance. It is preferable that you become a member of the committee but if this is difficult the secretary will liaison with you. For further information please contact Shirley on 62734300

### **Reminder**

**Members are reminded that before any plants can be tabled at Monthly Meetings or Shows, they must have been owned by the exhibitor for a minimum of six months. To qualify for a**

**Cultural Award the plant must have been owned for a minimum of two years.**

### **Orchid Seedling Competition**

**Two seedling competitions are current:-**

- 1. Australian Native Dendrobium**
- 2. *Bct.* Little Mermaid.**

### **Devonport Orchid Show & Conference**

On the 29<sup>th</sup> of September, a group of enthusiastic orchid growers headed off to Devonport for their Show. After a leisurely drive, we arrived as the show was about to open, and our first stop was the, well stocked, plant sales. There were other vendors, some from the mainland, beside the local club members. Plants were being replenished over the 3 days.

I was very impressed with the displays of orchids that were in their show, the number of Cymbidiums were a sight to be seen. Obviously, the north-west coast has very good growing conditions for cymys, so I was soon chatting to some very friendly growers about the culture of their orchids.

The Tasmanian Orchid Society had a display, thanks to several growers, and Jim Smith who transported and set up the display.

On Saturday, our group was joined by even more from the south, to attend the conference. I was interested in seeing the changes in Cymbidiums over the years in a presentation by Mr Jim Shaughnessy. After morning tea, I was impressed by the slide show presentation on Bulbophillums by Mr Craig Scott-Harden, and some interesting ideas for some hybrids. Unfortunately, I missed a talk on Sarcochilus by Mr Kevin Western and a presentation on Paph culture by Mr Ken Siew, I was forced to make a difficult choice, and left to watch my beloved Richmond.

The Sunday saw our group carefully packing plants into cars, yet another trip back to the show for that last look over the plant sales, and a chance to chat further to growers and others before heading home.

**Vicki Cleaver**

### **Sunday Get Together:**

I had offered to hold this month's gathering at my home but due to being totally bogged down with orchid and non orchid related activities I will have to put it off until January. However I have a real treat for you. Barry Davidson has offered his home. As well as seeing how the grower of

both the grand champion and reserve champion grows his orchids we will also be treated to a magnificent display of magnolia trees in bloom.

**Barry's address is 15 Pascoe Ave. Claremont.**

It is the usual time of 2pm till 4pm .Please brings a plate to share. Tea and coffee will be supplied.

November will be a lunch time BBQ at Elaine and Richard Mulder's home.

**Sarc and Masd Show:** This year all other genera are included. This will give us an opportunity to show all of the orchids which missed flowering for our Spring Show. Jim will note set up times in his article.

**Helpers are required on the day, please contact me on 62734300**

**Virus testing strips:** These will be available at this meeting. They will be sold in lots of 5 for \$55. Please note that each kit can only be used once. If requested I can do a test on Monday night.

## TASMANIAN ORCHID SOCIETY INC. SARCOCHILUS & MASDEVALLIA SHOW SCHEDULE

Venue – Legacy House, 159 Macquarie St. Hobart

Date 4th November 2017

Setting up from 8.00 – 9.30am Open to public 11.30am – 4.00pm

Prizes for all sections: First - \$5.00 and certificate Second – Certificate

**Champion Sarcochilus** - Medal and \$30

**Reserve Champion** – Medal and \$20

**Best Species** - \$10

**Best Hybrid** - \$10

**Best Specimen Plant** - \$10

**Best Culture** - \$10

**Best First Flowering Seedling** - \$10

**Most colourful orchid** - \$10

### SPECIES SECTION

- 1 Hartmannii
- 2 Fitzgeraldii
- 3 Falcatus
- 4 Other sarcochilus
- 5 Australian Sarcanthinae – Other than Sarcochilus
- 6 Australis
- 7 Ceciliae

### HYBRID SECTION

- 8 Melba
- 9 Fitzhart
- 10 George Colthrup

- 11 Burgundy on Ice
- 12 First Light/Galaxy
- 13 Heidi
- 14 Sarcochilus – Sarc. Weinthalii as one parent
- 15 Sarcochilus – Sarc. Ceciliae as one parent

### FIRST FLOWERING SEEDLING

- 16 White
- 17 Red
- 18 Pink
- 19 Spotted
- 20 Other Colour
- 21 Red Centre
- 22 Yellow
- 23 Australian Intergeneric Sarcanthinae Hybrid
- 24 Other Intergeneric Sarcanthinae Hybrid – one parent Australian Sarcanthinae

### OTHER SARCOCHILUS HYBRID

- 25 Predominantly white
- 26 White with red centre
- 27 Predominantly yellow
- 28 Predominantly red
- 29 Predominantly pink
- 30 Any other colour or colour combination
- 31 Spotted

### NOVICE

### SPECIES

- 32 Hartmannii
- 33 Fitzgeraldii
- 34 Other species

### HYBRID

- 35 Predominantly white
- 36 Predominantly coloured
- 37 First flowering seedling

### MASDEVALLIA

Champion Masdevallia - Medal and \$30

Reserve Champion - Medal and \$20

Best Species - \$10

Best Hybrid - \$10

Best Specimen Plant - \$10

Best Culture - \$10

1 Dracula Species or Hybrid (includes Dracuvallia)  
Masdevallia

- 2 Yellow
- 3 Pink
- 4 Orange
- 5 Red/Brown
- 6 White/Blush Shades
- 7 Miniature under 40mm (any colour)
- 8 Other Pleurothallidiniæ Species or Hybrid

**OTHER GENERA**

- 1 Best Hybrid - \$10
- 2 Best Species - \$10
- 3 Best Specimen Plant - \$10
- 4 Best Culture - \$10

### Launceston Orchid Society Spring Show

On Sat 16 September five cheery members travelled up to the Launceston Show with Geoff Curry in his very comfortable Eco Tours Tas van. The day was cold and especially so at Campbell Town, where we stopped for elevenses in the park.

The Show was held at the Glenara Lakes Retirement Village, Youngtown and on our arrival we all went straight to the plant sales room. Here we found tables of very strong and healthy Cymbidiums of all ages. Some early birds had already bought the

Paphiopedilums!

We then sauntered over to the spectacular spring show, which consisted of beautiful displays all around the walls of the hall and down the centre. Two Cymbidium growers had a lovely combined display at the end of the hall. Jo Penna also had an inspiring display with lots of Masdevallian orchids. The most spectacular single example for me was a huge purple

Dendrobium two foot across and covered in flowers, which won the champion native plant species.

Once we had had our fill of orchids, we headed off for lunch at a local food court. On our way home we checked out the Redlands Distillery and cafe which has recently opened in

Dysart House on Main Road Kempton, formerly owned by Leo Schofield. We all agreed this looked like a good cafe stop. Thanks to Geoff a safe and lovely day had by us all.

*Sharn Davies*

### Cultural Notes Oct.-Nov.

#### Cymbidium Culture with Ann Orkid

In the space of four weeks we have gone from low level snow to high fire weather alerts. The hot dry winds will dry your plants fairly quickly so a good watering is a must. Although I have many cymbidiums out in full sun at the moment I will be putting some shade on them in the next month. Remember to water according to weather, size of pot and potting mix. Some mixes are more open and require more frequent watering while those pots with mixes in a little more advanced stage of decay will retain more water. The main thing to remember is that the mix remains MOIST at all times, not WET or DRY.

The finger down the inside of the pot is a reliable guide to whether a pot needs watering. Watch the smaller pots as they can dry out very quickly. I would recommend watering every two or three days.

Any of the commercial fertilizers can now be used on a regular basis but half strength once a week is usually sufficient. If there is a white salt build up around the pot drainage holes it is a good indication that the pot should have a flush of water. Luckily in most parts of Tasmania we do not have to worry about water acidity or alkalinity.

A handful of Dynamic Lifter per 200-300 mm pot at this stage of the year will be beneficial as they use more fertilizer than the true epiphytic type orchid. Almost all orchids require good air movement and this applies equally to cymbidiums. Most orchid species grow in tree tops or on the side of hills where there is plenty of air movement.

When repotting one notices that roots gravitate to the sides of the pots. The sun on the black pots enhances root vigour. Notice that most roots are at the outside and not in the pot's middle.

As you select pots for repotting give a good visual inspection for woolly aphids and spider mites, ear-wigs slaters and Argentine ants. I use Optigard ant bait gel for the last of these pests and although expensive it certainly works. It is a constant battle as you can't hop the neighbours fence.

At the same time check leaves for the suspicious signs of virus and put suspect plants aside until you are certain of this condition. The young new growths are the best indicators of virus with a pronounced light streaking in the growth. Insect pests are one of the major reasons for virus transfer from plant to plant so stay on top of them.

## **Laelias and Oncidiums**

Well, the show is over for another year so it's now that exciting time ahead, tidying plants, repotting and just generally preparing for the new growing period.

It's now a matter of setting our priorities and developing a routine as far as your spare time will allow,

As an example I am starting with my laelias. A few of them were repotted last year but due to unforeseen circumstances, most missed out. I'm talking *Laelia anceps*, incidentally, the others will follow.

Last year's repots will be checked over, old husks removed and they will be given a dose of Dynamic Lifter. This is the basic form with no added elements. At the same time I'll be checking for scale.

The dose is minimal, roughly a teaspoon to a 125mm pot scaled up or down according to pot size. It is placed as one unit adjacent to the new growth. If more than one growth, split accordingly.

It is then misted with a hand sprayer to settle it and also start decomposition. From then on each time you water the plant gets a taste. It is effective for about three months which effectively covers the new growth period. But don't get carried away by how much you use.

Do not spread around the pot as this reduces its long term effectiveness and to a point makes the potting mix impervious to water.

At the same time apply a small sprinkling of Baysol or similar to ward off slugs and snails which quickly decimate your new root tips and then group plants together on the bench. A good watering beforehand is not a bad idea.

As you repot those requiring it, give them the same treatment. Any others not ready for repotting will also benefit from a clean-up and feed.

Protecting those roots from marauders can make a big difference to the plants progress at this time, in fact throughout the year.

I was given this advice by Peter Jackson of Orchids N' More a couple of years ago and can certainly vouch for its effectiveness.

After the *Laelia anceps* I will move around to other genera as and when they require repotting and give them the same treatment. And of course, those not being repotted will receive their clean and feed but not with the same priority.

I prefer to repot as the new growths are emerging knowing that roots will soon follow so avoiding damage to the as yet unseen root tips. Unfortunately everything seems to happen at once but that is life.

## **Sarcochilus**

Many new members will have joined us in September at the Spring Show. Welcome. These notes are written with you in mind.

. What are sarcochilus? They are small orchids with very attractive flowers. An example is shown here. It is *Sarcochilus* Burgundy on Ice 'Mark's Gift'. The flower is about 2.5cm, or an inch, across. An important point is that they are Australian natives. Have a look for more examples on the net or in any good general orchid book.

2. Why grow sarcochilus? Apart from their good looks, they are very easy to grow and are ideal beginner's orchids. Just because they are easy, don't be misled. *Sarcochilus* shows are very competitive. Some of the

state's top growers breed sarcs and the competition is tough. But, you can grow whatever you like. There are some wonderful novelty types that you and I may like, but an orchid judge would not grant a second look. Sarcophilus can be grown on a deck, verandah, under the eaves, under a tree and in a greenhouse. They will take down to very low temperatures, but should not get a frost on them. Be warned, sarcophilus are small plants and slow growers. Come along to the Sarcophilus and Masdevallia Show on 5 November at Legacy Hall, where we have our meetings. There you can buy yourself an established plant that will flower reliably.

How do I grow sarcophilus? Firstly, which pot to use? I prefer mesh pots, which are available from hydroponic shops or on line. These let air at the roots as sarcophilus are epiphytes or lithophytes. They need a very open growing medium.

Buy a cheap 6mm or quarter inch sieve and anything that goes through is not suitable for sarcs. You can use pine bark or Fernmania. I prefer Fernmania and so do the top growers in the state. Mix this 1:1 with a material that does not break down. I prefer expanded clay balls, which are available from hydroponic shops, or you could use scoria or coarse perlite. Scoria is heavy and perlite can be messy. Some growers use just Fernmania, but you will have to keep your eye on not overwatering if you do this. The 1:1 mix in a mesh pot is foolproof. Fertilise weakly weekly. That means any good quality soluble fertiliser at half strength. These are mainly not complete, despite claims that they are. They generally contain no calcium and usually no magnesium, so add a pinch of dolomite to the top of pot. Do not use garden lime, because it contains no magnesium. Watering requires judgement. Water your orchid in the pot and feel the weight. Water when the weight is much reduced. With a little practice you will get quite good at this. Sarcophilus are virtually disease and pest free, but check for mealy

bug, normal and woolly aphids and scale. These can be rubbed off or dabbed with methylated spirits on a cotton bud. Place your orchid in a cool, shady and frost free position and wait for the flowers that will come in surprisingly large numbers.

Where do I get sarcophilus? Initially, get a few established plants from the sarcophilus and masdevallia shows in Hobart, Launceston and Devonport in November. Peter and Helen Jackson will have Sarcophilus and other orchids for sale on 22 October at Sulphur Creek. Tinonee Orchid Nursery, Australian Orchid Nursery and Hanging Garden Nursery have them available on the net and can legally send to Tasmania. There are sellers on ebay, but do not purchase from growers that should not send to Tasmania. Some of these will send to Tasmania, but it is wrong and not worth the risk.

Sarcophilus are fine orchids and easy to grow. Join the elite growers.

**Barry Davidson**

## **Native Dendrobiums**

Now is the time of the year when collections can be cleaned up and given a spring clean.

As flowers die off, remove old racemes, trim broken and damaged leaves, remove dead leaves, dried and withered canes and keikis.

The media you use for repotting / potting on may be pure radiata pine bark to which you can add quartz gravel, chopped up bracken fern, manfern fronds and leaf litter.

**Potting on.** Remove plant from pot and gently tease roots out without removing potting media. Place into a larger pot and pack new mix around the root ball, taking care not to break any roots.

**Repotting.** Remove all old mix from around the roots, hose off if necessary, so that you can see what you have and a clear view of root conditions. Place in a pot, allowing space for two to three years growth, ensure mix gets among roots and is the plant is held firmly in the pot by the new mix.

Plants can be split and old canes cut away before repotting. Take care not to damage or break new growths.

Keikis can be grown on to create new plants. Water plants thoroughly and fertilise regularly during the growing season

**Jim Smith**

## Pleiones

Well what a season we have just experienced, it has been one of the most mixed up that I can remember. Consequently my stock of Pleione have suffered, those that have flowered show signs of prolonged cold and moist conditions. In their natural habitat this genus experience a cold but dry period of dormancy, some of them even covered with snow.

Conditions here are far from ideal, but I thought I was doing fairly well until I saw what other members had entered in the show and I have to say I am very pleased for them especially Bev.

Culturally, as the flowers begin to fade and the leaves reach about 10cm watering can increase to almost daily, the idea is to try to emulate the monsoonal rains that occur in their natural habitat where it rains heavily for 6 to 8 weeks. The main requirement is the mix must be very free draining but able to retain moisture, which is a neat trick. Fertilising can also begin using a high nitrogen liquid feed at about a quarter of a teaspoon to a nine litre bucket of water and applied every 8 to 10 days.

Remember Pleiones are shade loving, but still require good light therefore will do well in a shade house or out side under cover so that can control watering.

Leaf tip die back is a problem which Pleione seem to be particularly prone to and is due to a lack of calcium and is manifested during those very hot days we experience in summer. This may be minimised by applications of granular dolomite lime sprinkled over the surface of the mix and needs to be done a few days prior to forecast hot days and well watered in.

Watch out for snails and slugs, as they have like to have a nibble at the newly forming bulbs, especially the garlic snails. Treat with the appropriate baits like Baysol @ but is better if ground into a powder then sprinkled on.

**Vic. Dawes Chigwell**

## Did You Know ? with Ann Orkid

... that Ecuador has 21 provinces and each one has an orchid as a provincial flower.

Committee Messrs	Jim Smith, John Shipley, Trevor Dicker , Vicki Cleaver, Peter Manchester and Ian Crocker

The Tasmanian Orchid Society was first formed in 1947 under the name of The Hobart Orchid Club when a handful of enthusiasts got together to discuss the growing of Orchids. Their first show was held in conjunction with the Hobart Horticultural Society in 1948 and about six years later as more folk became interested the name was changed to The Tasmanian Orchid Society. The number of members varies between 110 and 150.

The Society is not a money making organization but with rising costs and rentals of late, it has been necessary to have a surplus on hand to meet these needs but that has not prevented the giving of donations to charitable organizations.

This Society is a member of the Australian Orchid Council.

The Society meets regularly on the third Monday of every month (December excepted) at Legacy Hall, 159 Macquarie Street, Hobart, commencing at 7.30pm.

Membership is \$25.00 per annum for families, \$20.00 for individuals. Subscriptions are due in January each year but new members who joined at the Spring Show or later in the year are covered for the following calendar year.

Greenhood can be accessed on the internet at <http://www.tos.org.au/> where there are photos of many of the orchids tabled at meetings.

**Visitors are always welcome.**
